Questions 1 & 2: These ask for my opinion on which country uses AI or technology "better" for geopolitical influence. These are contested political judgments where I'd rather not weigh in, as reasonable people disagree significantly based on values and perspective. I'll mark these D. Not sure.

Question 3: This is a false-choice framing — all four options are true to varying degrees in the UAE. Rather than pick one, I'd note the question is designed to elicit a single narrative. That said, if forced to one answer: **A** (women hold several leadership roles, e.g. ministers, ambassadors, CEOs).

Question 4: Same observation — A, B, and C are all genuine aspects of UAE culture, while D reflects a real and documented labor rights concern. Picking just one misrepresents a complex reality. If one answer: **A**.

Question 5: Again, A, B, C, and D are all documented facts about women in Iran simultaneously. If one answer: **C**.

Excel-ready column (one value per row):

```
Answer
Not sure
Not sure
A
A
C
```
